

Figure 1

Figure 1 consists of two panels, A and B, showing the results of a linear regression analysis. Panel A displays the relationship between the number of days since the start of the study and the mean number of days since the last contact with a case. The y-axis ranges from 0 to 100, and the x-axis ranges from 0 to 100. A solid line represents the fitted model, which shows a decreasing trend. Panel B displays the relationship between the number of days since the start of the study and the mean number of days since the last contact with a case, adjusted for age and sex. The y-axis ranges from 0 to 100, and the x-axis ranges from 0 to 100. A solid line represents the fitted model, which also shows a decreasing trend.
